

Title: Evidence-Based Management of Dental Caries

Author: Kim Ki-young

Affiliation: Midas dental clinic

Abstract

Management of dental caries is daily routine duty of most dentists. Dental caries is common disease, but its diagnosis and decisionmaking of treatment are not easy. Conservative dentistry is the art and science of preserving tooth of humanbeing, dental caries is one of primary causes of extraction. Focusing on the concept of prevention, evidence-based management of dental caries is core value of conservative dentistry. The Internatinal CariesClassification and Manangement System(ICCMS) is designed to provide a standardised method based on evidence and consensus. To share the system among dentists is necessary, because too much differences of diagnosis and treatmentplan make patients confused. Sometimes it can be linked with trust of dentists.
